SUMMARY

Driven and self-motivated B.Tech Information Technology student (graduating 2026) with hands-on industry experience as an Amazon SDE Intern. Proficient in ReactJS, JavaScript, HTML5, and CSS3, with a strong foundation in component-based development, responsive UI design, and REST API integration. Familiar with backend concepts including .NET, SQL, and relational database design. Consistent track record of taking ownership across technical projects and thriving in collaborative Agile environments. Strong communication skills and a genuine passion for building scalable, user-focused SaaS products.

TECHNICAL SKILLS

ReactJS, JavaScript (ES6+), HTML5, CSS3, Responsive UI Design, Component-Based Development, REST API Integration, API Design, Git, GitHub, Version Control, Spring Boot, Express.js, C# basics, .NET Core concepts, Backend Logic, MySQL, MongoDB, SQL, Relational Database Design, Java, Python, C++, Agile, SDLC, Unit Testing, Integration Testing, Debugging, Clean Coding, Code Reviews, LangChain, RAG Systems, NLP, Prompt Engineering, LLM Applications, Postman, Swagger, AWS

EDUCATION

Degree: Bachelor of Technology (B.Tech) – Information Technology 08/2022 – 05/2026
Sri Krishna College of Engineering and Technology, Tamil Nadu, India

Degree: Higher Secondary Certificate (HSC) 05/2023 Score: 91.3%
St. Thomas Matriculation Higher Secondary School, Tamil Nadu, India

WORK EXPERIENCE

Software Development Engineer Intern 01/2025 – 06/2025
Amazon — Full-Time Internship, Agile Team Environment

- Developed 3+ Java-based application modules following clean coding practices and SDLC guidelines, directly contributing to core system functionality within an Agile sprint-based workflow.
- Constructed a web-based purchase interface with secure transaction validation logic, improving checkout reliability by approximately 30% and reducing transaction failures across the system.
- Planned and executed 15+ unit and integration test cases using structured testing practices, strengthening code quality and reducing component defect rate by over 25%.
- Identified and resolved 10+ production defects through systematic root-cause analysis and collaborative problem-solving, improving overall application stability.
- Participated in code reviews, sprint planning, and Agile ceremonies, demonstrating strong communication skills and taking full ownership of 2 assigned feature modules end-to-end.

PROJECTS

Paws & Care – Pet Service Booking Platform *ReactJS, JavaScript, HTML5, CSS3, REST API, Git*

- Developed a full-featured ReactJS web application using component-based architecture, delivering 5+ reusable UI components that reduced development time for new feature additions.
- Implemented REST API integration across 4+ endpoints for dynamic data fetching, real-time search, and booking workflows, enabling seamless user interactions with live service data.
- Crafted a fully responsive UI with HTML5 and CSS3 across 6+ pages, ensuring consistent cross-device experience on both mobile and desktop viewports.
- Maintained version control using Git with structured branching strategy, managing 20+ commits across the full project lifecycle with clean, documented code history.

Online News Portal – Backend Application *Spring Boot, MySQL, SQL, REST API, .NET, Git*

- Developed and deployed 8+ secure REST APIs with authentication support, applying SQL-based relational database design and query optimization for efficient content delivery.
- Applied clean coding practices, SDLC principles, and Git version control throughout development, achieving zero critical bugs at the time of final testing.
- Optimized MySQL database schema using normalized table structure across 5+ tables, reducing average query execution time and improving news content delivery performance.

AI Healthcare Awareness Chatbot *Python, NLP, LangChain, RAG, Prompt Engineering*

- Developed a context-aware chatbot using NLP and retrieval-augmented generation (RAG) with LangChain, improving response relevance accuracy by over 40% compared to a baseline model.
- Applied 10+ prompt engineering techniques to iteratively improve LLM response quality, reducing irrelevant or inconsistent outputs for domain-specific healthcare queries.

- Independently researched, integrated, and tested the end-to-end LLM pipeline within 4 weeks, demonstrating strong problem-solving ability and self-motivated initiative.

ACHIEVEMENTS

- Solved 250+ Data Structures and Algorithms problems on LeetCode, ranking in the top percentile among peers and demonstrating consistent problem-solving ability.
- Participated in Smart India Hackathon – collaborated in a cross-functional team of 6 members to prototype a software solution within a 36-hour sprint, showcasing communication skills and ownership.
- Presented research on AI + IoT Women Safety System at the academic level, earning recognition for applied technical development and strong written and verbal communication.
